IN THE CLAIMS

Please amend claims 1, 5, 6, 24-26, 36-39, 41, 53, 61-63, and 66, and cancel claims 20-22, 27, 42, 48-51 and 60, as follows:

(Currently amended) A chemical protective covering, comprising:

 a laminate that is a composite of having a layer comprising a sulfonated aromatic polymer,

wherein the polymer comprises at least one repeating aromatic group selected from 5, 6, or 7 membered single or fused rings having 0, 1, 2, 3, or 4 heteroatoms selected from N, O or S, and at least a portion of the aromatic groups having at least one pendant group comprising a sulfonic acid, or its salt,

wherein the polymer has a sulfonic acid equivalent weight of about 400-800 (IEC: 1.25-2.5 meg/g), and

at least one <u>expanded polytetrafluoroethylene (ePTFE)</u>
<u>membrane</u> <u>additional layer</u> laminated to the <u>layer-comprising</u> the sulfonated aromatic polymer,

wherein the laminate has a moisture vapor transmission rate of greater than or equal to about 600 g/m 2 /day and has a permeation to bis-2-chloroethyl sulfide of less than or equal to 100 μ g/cm 2 over a 20 hour period.

- 2. (Original) The chemical protective covering of claim 1, wherein the covering is an article of apparel or enclosure.
- 3. (Original) The chemical protective covering of claim 2, wherein the article of apparel or enclosure is selected from outer wear, under wear, jackets, pants, gloves, foot wear, and hoods.
- 4. (Original) The chemical protective covering of claim 2, wherein the enclosure is selected from tents, sleeping bags, casualty bags, and shelters.
- (Currently amended) The chemical protective covering of claim 1 wherein the <u>protective covering comprises</u> at least one additional

- layer comprises at least one layer selected from fabric, membrane and film.
- 6. (Currently amended) The chemical protective covering of claim 1, wherein the <u>protective covering comprises</u> at least one additional layer is at least one layer of fabric selected from knit, woven or non-woven apparel fabrics comprising synthetic or natural fibers of polymers selected from poly(aliphatic amide), poly(aromatic amide), polyester, polyolefin, wool, cellulose based fibers, modified cellulose, polyurethane, acrylics, modacrylics, and a blend thereof.
- 7. (Canceled)
- 8. (Original) The chemical protective covering of claim 1 having a moisture vapor transmission rate of greater than or equal to about 2000 g/m²/day.
- 9. (Canceled)
- 10. (Previously presented) The chemical protective covering of claim 1, having a permeation to bis-2-chloroethyl sulfide of less than or equal to 30 $\mu g/cm^2$ over a 20 hour period.
- 11. (Previously presented) The chemical protective covering of claim 1, having a permeation to bis-2-chloroethyl sulfide of less than or equal to 10 μg/cm² over a 20 hour period.
- 12. (Previously presented) The chemical protective covering of claim 1, having a permeation to pinacolyl methylphosphono fluoridate of less than or equal to 30 μg/cm² over a 20 hour period.
- 13. (Previously presented) The chemical protective covering of claim 1, having a permeation to pinacolyl methylphosphono fluoridate of less than or equal to 10 μg/cm² over a 20 hour period.

- 14. (Previously presented) The chemical protective covering of claim 1, having a permeation to pinacolyl methylphosphono fluoridate of less than or equal to 5 μg/cm² over a 20 hour period.
- 15. (Canceled)
- 16. (Original) The chemical protective covering of claim 1 wherein at least a portion of the aromatic groups are linked by one or more linkages comprising ketone, sulfone, ether, sulfide, urethane, amide, imide, ester, substituted or unsubstituted saturated or unsaturated C₁₋₅ alkylene, substituted or unsubstituted phosphine, and phosphine oxide groups.
- 17. (Original) The chemical protective covering of claim 1 wherein at least a portion of the aromatic groups have one or more substitutions selected from C₁-C₈ alkyl and haloalkyl, aryl, ketone, hydroxyl, halogen, amine, cyanide, nitrile, sulfide, carbonyl, C₁-C₈ ester, and C₁-C₈ alkoxyl group.
- 18. (Original) The chemical protective covering of claim 1, wherein the sulfonated aromatic polymer is crosslinked.
- 19. (Original) The chemical protective covering of claim 1, wherein the sulfonated aromatic polymer is ionically crosslinked.
- 20 23 (Cancelled)
- 24. (Currently amended) A chemical protective article of apparel or enclosure for use in reducing exposure to chemicals, comprising:

a fabric laminate capable of transmitting water vapor, having consisting essentially of at least one layer of apparel fabric selected from knit, woven or non-woven apparel fabrics laminated to a layer comprising at least a sulfonated aromatic polymer, wherein the polymer comprises at least one repeating aromatic group selected from 5, 6, or 7 membered single or fused rings having 0, 1, 2, 3, or 4 heteroatoms selected from N, O or S, and at least a portion of the aromatic groups having at least one pendant group comprising a

sulfonic acid, or its salt, wherein the polymer has a sulfonic acid equivalent weight of about 400-800 (IEC: 1.25-2.5 meq/g), and wherein the fabric laminate has a permeation to bis-2-chloroethyl sulfide of less than or equal to about 100 μ g/cm² over a 20 hour period.

- 25. (Currently amended) The chemical protective article of apparel or enclosure of claim 24 wherein the layer comprising the sulfonated aromatic polymer has a permeation to bis-2-chloroethyl sulfide of less than or equal to about 30 μg/cm² over a 20 hour period.
- 26. (Currently amended) The chemical protective article of apparel or enclosure of claim 24 wherein the layer comprising the sulfonated aromatic polymer has a permeation to bis-2-chloroethyl sulfide of less than or equal to about 10 μg/cm² over a 20 hour period.
- 27. (Cancelled)
- 28. (Original) The chemical protective article of apparel or enclosure of claim 24 comprising at least two layers of apparel fabric.
- 29. (Original) The chemical protective article of apparel or enclosure of claim 24 wherein the at least one layer of apparel fabrics comprises synthetic or natural fibers of polymers selected from poly(aliphatic amide), poly(aromatic amide), polyester, polyolefin, wool, cellulose based fibers, modified cellulose, polyurethane, acrylics, modacrylics, and a blend thereof.
- 30. (Original) The chemical protective article of apparel or enclosure of claim 24 wherein the article of apparel is selected from outer wear, under wear, jackets, pants, gloves, foot wear, and hoods.
- 31. (Original) The chemical protective article of apparel or enclosure of claim 24 wherein the enclosure is selected from tents, sleeping bags, casualty bags and structures.

- 32. (Original) The chemical protective article of apparel or enclosure of claim 24 wherein at least a portion of the aromatic groups are linked by one or more linkages comprising ketone, sulfone, ether, sulfide, urethane, amide, imide, ester, substituted or unsubstituted saturated or unsaturated C₁₋₅ alkylene, substituted or unsubstituted phosphine, and phosphine oxide groups.
- 33. (Original) The chemical protective article of apparel or enclosure of claim 24 wherein at least a portion of the aromatic groups are linked by one or more linkages comprising ketone, sulfone, imide and ether.
- 34. (Original) The chemical protective article of apparel or enclosure of claim 24 wherein at least a portion of the aromatic groups have one or more substitutions selected from C₁-C₈ alkyl and haloalkyl, aryl, ketone, hydroxyl, halogen, amine, cyanide, nitrile, sulfide, carbonyl, C₁-C₈ ester and C₁-C₈ alkoxyl groups.
- 35. (Canceled)
- 36. (Currently amended) The chemical protective article of apparel or enclosure of claim 24 wherein the layer comprising the sulfonated aromatic polymer is a composite comprising the sulfonated aromatic polymer and laminated to at least one substrate.
- 37. (Currently amended) The chemical protective article of apparel or enclosure of claim 36 wherein the at least one substrate of the composite is a porous substrate.
- 38. (Currently amended) The chemical protective article of apparel or enclosure of claim 36 wherein the at least one substrate of the composite is an expanded polytetrafluoroethylene (ePTFE) membrane.
- 39. (Currently amended) The chemical protective article of apparel or enclosure of claim 36 38 wherein at least a portion of the sulfonated

- aromatic polymer resides partially or fully in the expanded polytetrafluoroethylene (ePTFE) membrane.
- 40. (Original) The chemical protective article of apparel or enclosure of claim 38 wherein the layer having the sulfonated aromatic polymer is a composite comprising the sulfonated aromatic polymer and at least two substrates.
- 41. (Currently amended) A chemical protective article of apparel or enclosure for use in reducing exposure of a person to harmful chemicals comprising a fabric laminate capable of transmitting moisture vapor and resisting permeation by harmful chemicals, comprising:

at least one layer of apparel fabric selected from knit, woven and non-woven apparel fabrics laminated to a layer comprising a composite consisting essentially of a sulfonated aromatic polymer, the sulfonated aromatic polymer comprising repeat units selected from sulfonated polyether sulfone, sulfonated polyether ketone, sulfonated biphenyl sulfone, sulfonated polyphthalazinone ether ketone, sulfonated polyimide, sulfonated polybenzimidazole, and sulfonated polyphenylene oxide, wherein the sulfonated aromatic polymer has a sulfonic acid equivalent weight of about 400-800 (IEC: 1.25-2.5 meq/g), and between two expanded microporous polytetrafluoroethylene membranes

wherein the fabric laminate has a permeation to bis-2-chloroethyl sulfide of less than or equal to about 100 $\mu g/cm^2$ over a 20 hour period.

42. (Cancelled)

43. (Original) The chemical protective article of apparel or enclosure of claim 41 wherein the at least one layer of apparel fabric comprises synthetic or natural fibers of polymers selected from poly(aliphatic amide), poly(aromatic amide), polyester, polyolefin, wool, cellulose based fibers, modified cellulose, polyurethane, acrylics, modacrylics, and a blend thereof.

- 44. (Original) The chemical protective article of apparel or enclosure of claim 41 comprising at least two layers of apparel fabric.
- 45. (Original) The chemical protective article of apparel of claim 41 wherein the fabric laminate is waterproof.
- 46. (Original) The chemical protective article of apparel or enclosure of claim 41 wherein the fabric laminate is an article of apparel selected from outer wear, under wear, jackets, pants, gloves, foot wears, and hoods.
- 47. (Original) The chemical protective article of apparel or enclosure of claim 41 wherein the fabric laminate has a permeation to bis-2chloroethyl sulfide of less than or equal to about 30 µg/cm² over a 20 hour period.
- 48 52 (Cancelled)
- 53. (Currently amended) A method of reducing exposure of a person to chemicals, comprising:

interposing a chemical protective covering between a person and a noxious or harmful chemical, wherein the chemical protective covering comprises a fabric laminate comprising made by the steps <u>of</u>

providing at least one layer of apparel fabric, laminated to a layer comprising at least

providing a sulfonated aromatic polymer between two porous or microporous substrates to reside in at least a portion of the pores of the porous or microporous substrates, wherein the sulfonated aromatic polymer comprises at least one repeating aromatic group selected from 5, 6, or 7 membered single or fused rings having 0, 1, 2, 3, or 4 heteroatoms selected from N, O or S, and at least a portion of the aromatic groups having at least one pendant group comprising a sulfonic acid, or its salt, wherein the sulfonated aromatic polymer has a sulfonic acid

equivalent weight of about 400-800 (IEC: 1.25-2.5 meg/g), and

laminating the at least one layer of apparel fabric to at least one of the two porous or microporous substrates on a side opposite the sulfonated aromatic polymer,

and- wherein the <u>fabric</u> laminate has a permeation to bis-2-chloroethyl sulfide of less than or equal to about 100 $\mu g/cm^2$ over a 20 hour period.

- 54. (Original) The method of claim 53 wherein the chemical protective covering is an article of apparel or enclosure.
- 55. (Original) The method of claim 53 wherein the chemical protective covering is an article of apparel.
- 56. (Canceled)
- 57. (Original) The method of claim 53 wherein the fabric laminate has a permeation to bis-2-chloroethyl sulfide of less than or equal to about 30 μg/cm² over a 20 hour period.
- 58. (Original) The method of claim 53 wherein the sulfonated aromatic polymer has repeat units selected from sulfonated polyether sulfone, sulfonated polyether ketone, sulfonated biphenyl sulfone, sulfonated polyphthalazinone ether ketone, sulfonated polyimide, sulfonated polybenzimidazole, and sulfonated polyphenylene oxide.
- 59. (Original) The method of claim 53 wherein the sulfonated aromatic polymer comprises a blend of sulfonated and non-sulfonated polymers.
- 60. (Cancelled)
- 61. (Currently amended) The method of claim <u>53</u> 60 wherein the <u>two</u> <u>porous or microporous substrates are at least one substrate is</u> selected from porous polytetrafluoroethylene (expanded PTFE), polyurethane, polyamides, polyimides, polysulfones, and polyolefins.

- 62. (Currently amended) The method of claim 61 wherein the at least one substrate is expanded polytetrafluoroethylene (ePTFE).
- 63. (Currently amended) The method of claim 53 60-wherein the composite comprises at least two substrates comprising are expanded polytetrafluoroethylene (ePTFE).
- 64. (Original) The method of claim 53 comprising at least two layers of apparel fabric.
- 65. (Original) The method of claim 53 comprising covering at least a portion of a person who may be exposed to a harmful chemical with a chemical protective article of apparel having a fabric laminate comprising a layer having a sulfonated aromatic polymer with a sulfonic acid equivalent weight of about 400-800 (IEC: 1.25 2.5 meq/g), wherein the fabric laminate has a permeation to bis-2-chloroethyl sulfide of less than or equal to about 30 μg/cm² over a 20 hour period.
- 66. (Currently amended) A chemical protective covering, comprising:

 a laminate having a layer comprising that is a composite of a sulfonated aromatic polymer,

wherein the polymer comprises at least one repeating aromatic group selected from 5, 6, or 7 membered single or fused rings having 0, 1, 2, 3, or, 4 heteroatoms selected from N, O or S, and at least a portion of the aromatic groups having at least one pendant group comprising a sulfonic acid, or its salt,

wherein the polymer has a sulfonic acid equivalent weight of about 400-800 (IEC: 1.25-2.5 meg/g), and

at least one additional layer selected from a layer of apparel fabric or a porous or microporous substrate, laminated to the layer comprising the sulfonated aromatic polymer,

wherein the laminate is capable of transmitting moisture vapor and has a permeation to pinacolyl methylphosphono fluoridate of less than or equal to $30 \,\mu\text{g/cm}^2$ over a 20 hour period.

- 67. (Previously presented) The chemical protective covering of claim 66, further comprising a permeation to pinacolyl methylphosphono fluoridate of less than or equal to 10 μg/cm² over a 20 hour period.
- 68. (Previously presented) The chemical protective covering of claim 66, further comprising a permeation to pinacolyl methylphosphono fluoridate of less than or equal to 5 μg/cm² over a 20 hour period.
